

{ FOUNDER'S HALL COMMUNITY LICENSE ADDENDUM }

- Curtains and draperies
- Along window and door frames
- Ceiling and wall junctions
- Crown moldings
- Behind and around wall hangings and loose wallpaper
- Between carpeting and walls (carpet can be pulled away from the wall and tack strip)
- Cracks and crevices in walls and floors
- Inside electronic devices, such as smoke and carbon monoxide detectors
- Because bed bugs leave some persons with itchy welts strikingly similar to those caused by fleas and mosquitoes, the origination of such markings often go misdiagnosed. However, welts caused by bed bugs often times appear in succession and on exposed areas of the skin, such as the face, neck and arms. In some cases, an individual may not experience any visible reaction resulting from direct contact with bed bugs.
- While bed bugs typically prefer to act at night, they often do not succeed in returning to their hiding spots without leaving traces of their presence through fecal markings of a red to dark brown color, visible on or near beds. Blood stains tend also to appear when the bugs have been squashed, usually by an unsuspecting host in their sleep. And, because they shed, it's not uncommon for skin casts to be left behind in areas typically frequented by bed bugs.

Because humans serve as bed bugs' main mode of transportation, it is extremely important to be mindful of bed bugs when away from home. Experts agree that the spread of bed bugs across all regions of the United States is largely attributed to an increase in international travel and trade. Travelers are therefore encouraged to take a few minutes upon arriving at their temporary destination to thoroughly inspect their accommodations, so as to ensure that any uninvited guests are detected before the decision is made to unpack. Because bed bugs can easily travel from one room to another, it is also recommended that travelers thoroughly inspect their luggage and belongings for bed bugs before departing for home.

BED BUG DO'S AND DON'TS:

- Do not bring used furniture from unknown sources into your dwelling. Countless bed bug infestations have stemmed directly from the introduction into a resident's unit of second-hand and abandoned furniture. Unless the determination can be made with absolute certainty that a piece of second-hand furniture is bed bug-free, residents should assume that the reason a seemingly nice looking leather couch, for example, is sitting curbside, waiting to be hauled off to the landfill, may very well be due to the fact that it's teeming with bed bugs.
- Do inspect rental furniture for bed bugs before bringing it into your dwelling. Be sure to check any rented furniture, including mattresses and couches, for the presence of bed bugs before moving it into your dwelling.
- Do address bed bug sightings immediately. Rental housing residents who suspect the presence of bed bugs in their unit must immediately notify the owner.
- Do not attempt to treat bed bug infestations. Under no circumstance should you attempt to eradicate bed bugs. Health hazards associated with the misapplication of traditional and non-traditional, chemical-based insecticides and pesticides poses too great a risk to you and your neighbors.
- Do comply with eradication protocol. If the determination is made that your unit is indeed playing host to bed bugs, you must comply with the bed bug eradication protocol set forth by both your owner and their designated pest management company.
